DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

Picking the correct abstractions that were already existing to put together into a factory function

_____

2. What parts of encapsulating your logic were hard?

Returning the methods correctly, which formed part of my larger understanding of how factory functions work

_____

3. Is abstracting the book preview a good or bad idea? Why?

I think it's a great idea because it captures and contains everything necessary for the specific process of creating a preview for a book. Nothing that doesn't need to be touched can be touched. The process works as it should, fairly straight forward.

_____
